

Vacation System

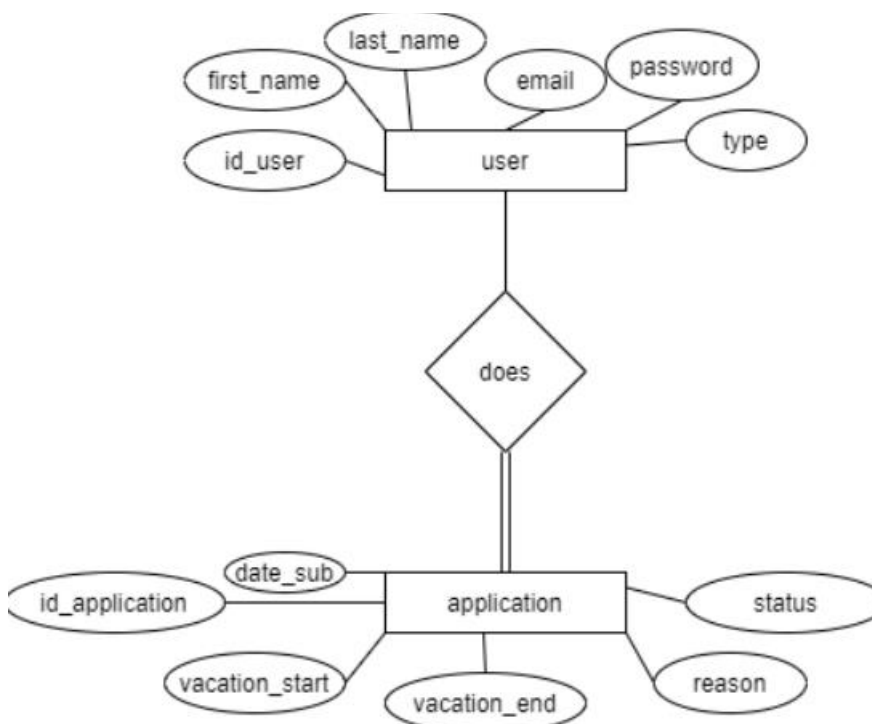

System where employees can request their vacation online. Supervisor receives email with an "accept" and a "reject" link. Employees receive an email with the outcome of their request.

Installation.

After downloading this project, please follow the step bellow:

1. Download sendmail (<https://www.glob.com.au/sendmail/>). You should replace file "sendmail.ini" with the file given in folder "replacement files". You also need to replace "php.ini" file in your php folder.
2. Please open your preferred browser and go to your phpMyAdmin (<http://localhost:5555>). Create a new database named "vacation_system_db", then insert to this database file named "vacation_system_db.sql".
3. Please open file "config.php" and replace user with your username on phpMyAdmin and enter your own password.

EER Diagram of database.
